InAcademia - simple, fast, secure, real-time student validation.

Online Academic Validation

With millions of students, academics and researchers across Europe the education sector is a huge market.

From cloud services to tickets to pizza, commercial providers want to offer great deals.

How do these commercial organisations verify student affiliation online?

InAcademia offers a simple, cost-effective, lightweight validation system to replace the time-consuming scanning and checking of ID cards.

How does it work?

Merchants wanting to use the service add a small plug-in to their checkout process.

This directs the user to validate their status through their institution’s Identity Provider.

InAcademia passes the result of this validation to the merchant as a simple “Yes/No”.

The merchant offers the discount to the user.

Secure & Privacy Preserving

InAcademia leverages the power of eduGAIN and the Identity services of the students’ institution to securely authenticate a student’s affiliation credentials.

InAcademia provides the merchant only with a simple “Yes/No” response and no personal information is shared.

Reliable and Up-to-Date

Each University maintains and verifies the identity and status of their students so merchants can trust the service to give accurate, reliable results.

InAcademia provides a cost-effective connection for your business to the world of academia.

InAcademia for Institutions

Institutions using InAcademia can offer their users access to and discounts from many services through one simple, secure service.
